

Gaslow Range.

Gaslow cylinders are well known in the refillable LPG leisure market range with a choice of sizes to suit most gas storage locker boxes for motorhome caravan requirements.

When traveling abroad the Gaslow refillable cylinder can be filled with ease with the aid of a simple LPG fillergun adapters.

Available from and simply installed by your local dealer, you can just pull up at one of the thousands of Autogas service stations throughout the UK and EU and fill up just like filling your car.

If you have a twin setup, not only will it fill up the empty but also will top up the spare cylinder, simply pay for the gas that you use.

Options of filler hose lengths and external filler points ensure even the most difficult install becomes easy to do. Easy to remove and transfer in the event that the owner decides to change motorhome / leisure vehicle.

Cheaper to refill while travelling.

Accurate float activated level gauge.

80% overfill protection.

Ergonomic hand wheel isolation valve.

Each bottle is fitted with a unique R67 Multi Valve which incorporates an automatic float activated 80% over fill protection device to limit the bottles filling to a maximum of 80%

Manual offtake valve also features a built in safety relief "rupture protection" valve.

Easy to read level gauge from above and side. Built in gas filter strainer element.

R6701 approval for country specific vehicle registration.

Gas Cylinder specifications:

Height:	310mm	460mm	580mm
Diameter:	202mm	246mm	304mm
Cylinder standard all cylinders:	Pi / R6701		

Autogas in the UK is Propane gas, however on the continent a small amount of Butane is added. If you are already using Propane you can convert your existing regulator with a simple brass adapter to suit the Gaslow offtake valve. For newer post 2002 motorhomes with 30mb bulkhead mounted regulators then simply change the high pressure pigtail to a purpose designed Gaslow version.
